

SuperiorRoads Pothole Patchers

SuperiorRoads Solutions offers two models of pothole patchers - the Python 5000 and the SR 6000. They are unique, one-person operated pothole patchers that repair an average pothole in less than two minutes using standard asphalt mixes.

The single operator stays safely inside the climate-controlled and comfortable cab while using a joystick to prepare the surface, deliver the ideal amount of asphalt and then compact it to create a long-lasting repair.

Superiorroads pothole patchers can be used nearly all year round, in a wide range of operating conditions. They will save you \$\$ in operating costs, and save your citizens \$\$ in vehicle repairs. You'll see even greater savings when your roads are kept in good repair and you're able to postpone resurfacing or rebuilding your roads.
