# Cloud-based city services

The next step in the digital transformation journey for governments.

What we solve

We provide a Cloud-Based City Services delivery platform for state and local governments (using existing systems and existing data).

What we do for you, our clients

We significantly improve communication with residents and simplify your city's administrative processes.
- Cocoflo's Cloud-Based City Services is a single software platform where administrators and citizens can interact.
- Administrators have a single consolidated interface for managing data and transactions.
- Citizens interact via Mobile or Web Application.

Why we do it

To make life easier and improve citizen engagement and experience. Cocoflo's Cloud-Based City Services:
- Provides access to all citizens, including those in remote locations.
- Provides transparency and efficient transactions, collecting revenues faster.
- Simplifies administration and reduces costs.

What makes us different?

Cocoflo's Cloud-Based City Services:
- Uses existing systems (with no data losses).
- Integrates information across different departments.
- Is a single common interface for citizen communications.

Citizen benefits:

- Easy to use.
- Saves time for busy people.
- Can do everything online—it's fast (millennials expect this option to be available!)
- Can do multiple city-related tasks in the same instance without multiple logins.

Municipal benefits:

- Collect money faster.
- Reduce costs.
- Provide equal access to people with disabilities or in remote locations.
- Future-proof city services for smart city technology integrations.
